Summary

Game Programmer studying at the DigiPen Program in Daegu, focusing on C++ and OpenGL for game development and computer graphics.

Experienced in real-time rendering and gameplay system implementation.

Emphasizes player-centered design and builds systems that are both technically feasible and well-integrated.

Education

DigiPen Institute of Technology, Daegu, South Korea
B.S. in Computer Science (Expected May 2029)

Relevant Coursework:

Computer Graphics, Data Structures, C++ Programming, Game Development

Skills

Programming Languages: C++, GLSL

Graphics & Game Development: OpenGL, raylib

Game Development Concepts: Gameplay Programming, Game Design, Technical Design, Computer Graphics

Tools: Visual Studio, CMake, Git

Projects

The Last Track | Game Designer | September – December 2024

- 2D room-based escape game set on a train, focused on puzzle-solving and player interaction
- Designed gameplay flow across multiple rooms with unique puzzles and interaction mechanics
- Created systems for object interaction, hint delivery, and player-driven puzzle solving
- Collaborated with team members to align gameplay design with implementation

OMG Corp. | Producer | March – June 2025

- 2D point-and-click office survival game focused on managing workload and reputation through strategic player choices
- Developed core systems including random seat assignment, event system, and interactive mini-games
- Structured gameplay flow using a state-based system to manage game progression
- Built gameplay features using C++ and raylib, contributing to UI/UX design and core game structure
- Completed a fully playable game with core systems and progression implemented within 3 months

NO.99 | Design Lead | September 2025 – June 2026

- 2D side-scrolling action game centered on movement-based gameplay and pulse energy management
- Defined core gameplay systems including pulse resource mechanics and player action flow
- Implemented a high/low attack system that forces player reactions through jump and crouch mechanics
- Developed UI systems, including pulse gauge and player feedback elements
- Created visual effects such as pulse-based visuals and managed post-processing systems to enhance atmosphere
- Structured level flow and enemy interactions to create a fast-paced, system-driven gameplay experience
- Designed level layouts by simulating player behavior and interaction flow to ensure intuitive and engaging gameplay

Leadership Experience

DigiPen Institute of Technology | Design Lead | Daegu, South Korea

- Initiated core game concepts and led detailed design for multiple projects, establishing overall direction and system structure
- Managed development scope and guided feature planning across programming, art, and UI
- Bridged design and implementation by coordinating team efforts to maintain a cohesive development process
